ICLEI – Local Governments for Sustainability

Low Emissions Development in an Urban World

Within the next **40 years**, urban population and relevant services is expected to be **doubled**.

The choice in design and performance of existing and this new Urban World will define the **success** or **failure** of the global path to low-emission, climate-resilient development globally.

Nantes Declaration of Mayors and Subnational Leaders on Climate Change – Roadmap for 2013-2015

Preamble + 20 action points for raising pre2020 ambition

- Response to Global processes
- Renewed climate advocacy strategy
- Financing to scale-up local climate action

21 November - UN Warsaw Climate Conference – Cities Day

As of October 2013, 414 cities and local governments, with a population of 438 million people in 45 countries, reported 836 climate and energy commitments, 4,208 mitigation and adaptation actions and 770 greenhouse gas inventories covering municipal operations and community activities that aggregate to an annual GHG emissions of 2.2 Giga tons of CO₂ equivalent.

Assuming;

- climate change will only be embedded in global SDGs
- a global climate regime, regardless of its effectiveness, can only enter into force only by 2020

a strong goal on sustainable urbanization can be one of the most effective, if not the only, assets to guarantee scaling-up, rapid action globally.
